Document No.	---	Revision	1.0

Note: (1) Lamp current is measured with current meter for high frequency as shown below. Specified values are for a lamp.

- (2) Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.
- (3) Life time (Hr) can be defined as the time in which it continues to operate under the condition: Temp. =  $25 \pm 3^\circ\text{C}$ ,  $I_L = 6.0\text{mA(rms.)}$  and  $f_L = 50\text{ KHz}$  until one of the following event occurs:
1. When the brightness becomes 50%.
  2. When the startup voltage ( $V_s$ ) at  $0^\circ\text{C}$  becomes higher than the maximal value of  $V_s$  specified above.

Note 3) Do not fix CPH1 and CPH2 to “H” or “L” level while the  $V_{DD}$  (+3.3V) is supplied. If CPH1 and CPH2 is fixed to “H” level or “L” level for certain period while the  $V_{DD}$  (+3.3V) is supplied, the panel may be damaged.

Note 4) Do not change t3 and t6 values in the operation. When t1 or t4 is changed, the panel is displayed as black.

Note 5) Please adjust LCD operating signal timing and FL driving frequency, to optimize the display quality. There is a possibility that flicker is observed by the interference of LCD operating signal timing and FL driving condition (especially driving frequency).

Note 6) All of the timing have to meet “ 6.3.1 AC timing chart – Pixel frequency must less than 40 MHz“ , frame rate 85Hz can be acceptable.

Note 7) All of the timing setting should be confirmed by Hannstar’s FAE.

### 6.4 Power On / Off Sequence :

Item	Min.	Typ.	Max.	Unit	Remark
TP1	0.4	—	10	msec	
TP2	60	—	200	msec

- Note :
- (1) The supply voltage of the external system for the module input should be the same as the definition of V<sub>DD</sub>.
  - (2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become white.
  - (3) In case of V<sub>DD</sub> = off level, please keep the level of input signal on the low or keep a high impedance.
  - (4) T4 should be measured after the module has been fully discharged between power off and on period.
  - (5) Interface signal shall not be kept at high impedance when the power is on.

## 10.0 GENERAL PRECAUTION

### 10.1 Use Restriction

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

### 10.2 Disassembling or Modification

Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

### 10.3 Breakage of LCD Panel

10.3.1 If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.

10.3.1 If liquid crystal contacts mouth or eyes, rinse out with water immediately.

10.3.2 If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.

10.3.3 Handle carefully with chips of glass that may cause injury, when the glass is broken.

### 10.4 Electric Shock

10.4.1 Disconnect power supply before handling LCD module.

10.4.2 Do not pull or fold the CCFL cable.

10.4.3 Do not touch the parts inside LCD modules and the fluorescent lamp's connector or cables in order to prevent electric shock.

### 10.5 Absolute Maximum Ratings and Power Protection Circuit

10.5.1 Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc., otherwise LCD module may be damaged.

10.5.2 Please do not leave LCD module in the environment of high humidity and high temperature for a long time.

10.5.3 It's recommended employing protection circuit for power supply.

### 10.6 Operation

10.6.1 Do not touch, push or rub the polarizer with anything harder than HB pencil lead.

10.6.2 Use fingerstalls of soft gloves in order to keep clean display quality, when persons handle the LCD module for incoming inspection or assembly.

10.6.3 When the surface is dusty, please wipe gently with absorbent cotton or other soft material.

10.6.4 Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.

10.6.5 When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.
